Bash - Functions 3

Bash - Functions

- How to use functions in bash

- Here an example: you can pass values returned by programms as parameter to check them.

```
#Functions=====================================
function check() {
    FC=$1
    if [ $FC != "0" ];then
           echo -e "--> ERROR\n"
    else
       echo -e "--> OK\n"
    fi
    }
#===============================================
```

- You can use the function by its name with parameter (here an exit code) e.g.: `check “$?”`
