parted Auto alignment for best performance

I bought an 3TB Seagate HDD and tried to create one big partition. fdisk is unable to do this but parted could.

XBMC Media Center with Jetway JNC98-525

and Atirc IR-receiver

I want to describe how I put together my home media PC. I will describe the software configuration in connection with the IR-receiver.

As software basis I've used XBMC. For remote control I've chosen the IR-recieve from atric. As hardware base I selected an board build by jetway (JNC98-525). It has HDMI and an NVIDIA ION2 Chipset.

Shrink VMware disk to contents size (for VMware Workstation users)

- When you using dynamically growing disk in VMware then they grow, but don't reduce its size when you delete files in the virtual machine.
- That's only interesting when you are using VMware Workstation in the server versions the default is a full allocated disk.

Seiichiros mail-setup adapted for Ubuntu: Postfix + Dspam/ClamAV + Dovecot2

To use Seiichiros mail-setup with Ubuntu 10.04 I have to make a couple of changes. I will describe here only these changes. The complete setup can be found on [Seiichiros Website](#).

The Ubuntu 10.04 standard repository doesn't offer a package for dovecot2. Dovecot1 doesn't support lmtpl and the antispam plugin has a bug. With use of an additional repository the configurations can be made as described by Seiichiro. I had to make a few adjustments and I integrated support for ClamAV.

Scansystem with Canon CanoScan LiDE 110

Unfortunately, there are still letters, some of them are useful for the tax return or just useful to have in digital form because of searching is much easier. So I want an system which is always ready to use. I bought a scanner and connected it to my Server. But how to use the buttoms on the scanner? So hear the setup for an [Canon CanoScan LiDE 110](#) scanner.
