Linux

Play with Alix2D13 (Archlinux)

I bought an Alix board from PCEngines to experiment a little with it. Here are a few tips, no ready-made solutions for router or something like that only independent problem solver to run the Alix with Archlinux.

Scansystem with Canon CanoScan LiDE 110

Unfortunately, there are still letters, some of them are useful for the tax return or just useful to have in digital form because of searching is much easier. So I want an system which is always ready to use. I bought a scanner and connected it to my Server. But how to use the buttoms on the scanner? So hear the setup for an Canon CanoScan LiDE 110 scanner.

Tomato Color Scheme

Recently I've updated Tomato on my Asus RT-N16 and my Netgear WNR3500Lv1 to Shibbys last version.
Oh ... so enough advertising 😉

I created my own `custom.css` and now I want to share the result with you.

Shell in a box for Archlinux

An AJAX web-based fullscreen terminal emulator where you can mark an copy text (depending on your browser, according to my tests opera is optimal). Forget Ajaxterm!

Sqlite2 for BlogTNG on Ubuntu 12.04

I recently installed a DokuWiki on Ubuntu 12.04 Server Edition. But after adding BlogTNG I only get an Error 500
