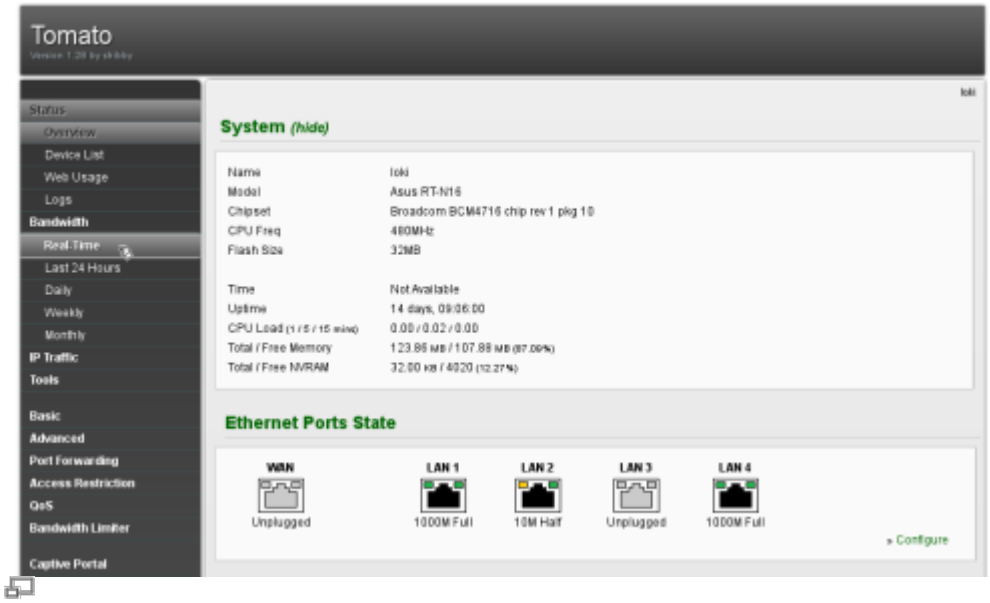
Tomato Color Scheme

Recently I've updated Tomato on my Asus RT-N16 and my Netgear WNR3500Lv1 to Shibbys last version.

Oh ... so enough advertising 😉

I created my own `custom.css` and now I want to share the result with you.
In `administration/admin access` you can select an custom.css so I take the “USB Blue - OpenLinksys” css and make some adjustments. The `custom.css` have to uploaded to `/www/ext`.

It's certainly not quite finished but for now ... anyone who would use it



my custom.css

Boot save

Laying under /www which is linked below /tmp (`/www/ext = /tmp/var/wwwext` on my router) your custom.css will be lost after reboot. To have the new style also after reboot place the css into the jffs and configure an init script (line ;)) like this

```
ln -s /jffs/custom.css /www/ext/custom.css
```

Download

custom.css.zip
