XBMC Media Center with Jetway JNC98-525 and Atirc IR-receiver

I want to describe how I put together my home media PC. I will describe the software configuration in connection with the IR-receiver.
As software basis I've used XBMC. For remote control I've chosen the IR-recieve from atric. As hardware base I selected an board build by jetway (JNC98-525). It has HDMI and an NVIDIA ION2 Chipset.

Hardware and Software in detail

Hardware

Board

I bought this Board: **NC98-510-LF**
For the IR-Receiver we need a serial port on the board. This one has an serial port typ-9 (later this will be important).

CPU	Atom D525 1.80GHz
RAM	2x DDR2 up to 4GB
Video	NVIDIA ION2 GPU
Video Ports	HDMI, VGA, DVI
Serial	1 * COM header internal

IR-Receiver

The IR-receiver Rev. 5 by the german manufacturer Atric.
This IR-receiver is available for various types of serial ports. You have to know which type your is.
You have to buy 10 1-pin cables (reason later described according to problems with the IR-receiver).

IR-Control

I bought One-All-URC-7960 here

Software

XBMC with minimal Ubuntu. Installed from live System on an CF-Card.
Download: here

Install standard Hardware and XBMC

This shouldn't be a problem

But some annotation:

xbmc10

- My Monitor seems to hate mono mp3 so I convert these. Otherwise XBMC say that the audio device doesn't work.
  - Create “.asoundrc” in your home this should fix the problem if you had it.

.asoundrc

```
pcm.dmixer {
type dmix
   ipc_key 1024
   ipc_key_add_uid false
   ipc_perm 0660
   slave {
      pcm "hw:1,3"
      rate 48000
      channels 2
      period_time 0
      period_size 1024
      buffer_time 0
      buffer_size 4096
   }
}

pcm.!default {
   type plug
   slave.pcm "dmixer"
}
```

- The best to use HDMI audio output for me was to set:
  - Standard audio output to → standard
  - Digital output for pass-through → HDA NVidia hdmi

xbmc11

- Now I doen't get sound via HDMI. One friend find the solution.

/etc/asound.conf

```
pcm.!default {
```

```
type hw
card 1
device 3
}
```

.asoundrc

```
pcm.!default {
        type plug
        slave {
            pcm "hw:1,3"
        }
}
```

- Sound Settings in xbmc seems to be irrelevant.

Installation of the IR-receiver

Atric provide a very comprehensive manual (German/English)
This Informations should help to connect the IR-Receiver to your board.

I have hit a board which make trouble. Power for the IR-board and train the power-on-signal was no problem (described in the manual).
But after I installed the IR-Receiver as described the media PC wasn't able to boot. Both LEDs turned on but nothing happen. This only when serial connected.
After some testing an some help from a colleague who has more experience with serial ports as I have we find the problem. responsible for the trouble was the first pin. This pin (DCD) is responsible for (Data) Carrier Detect (Wikipedia) and normally not essential for serial communication.

You can use the one-pin-cables which you can bought at the website of the IR-receiver. So the DCD-pin can be disconnected.

The IR-receiver will use this pin for transport the IR-signal. You have to change this by put the jumper to DSR as transport pin (lirc can be configured to use DSR pin to receive IR-signal).

Pin assignment

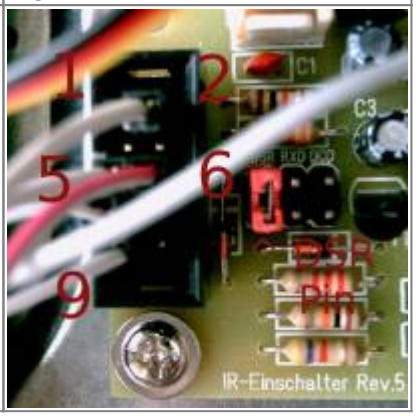
- The Pin assignment can be found in the manual of the IR-receiver and you mainboard (here).
- In the manual of the IR-receiver on page 13 and 15 you can find the pin assignment of the serial connector.
- In the manual of my mainboard the pin assignment of the serial port is located on page 15.

Pleas be careful **the order of counting the pins is different**
!!!! **Wrong connected pins can be destructive** !!!!

I don't take responsibility if you damage your Board! Please first read the manual's

I connect:

IR-Board	Mainboard (counting type of Jetway)
Pin 1	not connected
Pin 2	Pin 2
Pin 5	Pin 5
Pin 6	Pin 6
Pin 7	Pin 7
Pin 9	Pin 9

My serial port	My IR-receiver
	


Configuration of the IR-receiver

Get signals (Xubuntu xbmc11):

Lirc is installed when you use the live installation of XBMC. Now I had to configure it but the kernel-module used by lirc expect the IR-signal on the DCD-pin which was disconnected. So I had to change this. After some reaearch I find a solution. Inside the c-code of the kernel-module there is the data-pin set to DSR when a special hardware model is selected. You can give the type to modprobe when you load the module.

Previously you have to free the serial port.

Now test:

```
/etc/init.d/lirc stop
modprobe -r lirc_mceusb
setserial /dev/ttyS0 uart none
modprobe -v lirc_serial type=1
mode2 -d /dev/lirc1
```

Signals of your IR-Control should be appear as codes.

Configure lirc to load the right module

In /etc/lirc/hardware.conf you can configure which modules should be loaded when lircd starts here my version

/etc/lirc/hardware.conf

```
# /etc/lirc/hardware.conf
#
#Chosen Remote Control
REMOTE="Atric rev.5 IR Receiver"
REMOTE_MODULES="lirc_serial"
REMOTE_DRIVER=""
REMOTE_DEVICE="/dev/lirc1"
REMOTE_LIRCD_CONF="urc/urc-7960.conf"
REMOTE_LIRCD_ARGS=""

Chosen IR Transmitter
TRANSMITTER="None"
TRANSMITTER_MODULES=""
TRANSMITTER_DRIVER=""
TRANSMITTER_DEVICE=""
TRANSMITTER_LIRCD_CONF=""
TRANSMITTER_LIRCD_ARGS=""

#Enable lircd
START_LIRCD="true"

#Don't start lircmd even if there seems to be a good config file
#START_LIRCMD="false"

#Try to load appropriate kernel modules
LOAD_MODULES="true"

# Default configuration files for your hardware if any
LIRCMD_CONF=""

#Forcing noninteractive reconfiguration
#If lirc is to be reconfigured by an external application
#that doesn't have a debconf frontend available, the noninteractive
#frontend can be invoked and set to parse REMOTE and TRANSMITTER
#It will then populate all other variables without any user input
#If you would like to configure lirc via standard methods, be sure
#to leave this set to "false"
FORCE_NONINTERACTIVE_RECONFIGURATION="false"
START_LIRCMD=""
REMOTE_SOCKET=""
TRANSMITTER_SOCKET=""
```

Create /etc/modprobe.d/lirc.conf with the following content

lirc.conf

```
install lirc_serial /bin/setserial /dev/ttyS0 uart none; /sbin/modprobe
--ignore-install lirc_serial type=1
```

Reboot, and if I doesn't forget to mention anything it should work and the right modules should be loaded. Repeat the test with “mode2”.

Now lirc had to learn to interpret the signals of your ir-control The tool irrecord will help you. You only have to read and do what the program say. Or, if you had the same ir-control, you could use my config if you want.

```
/etc/init.d/lirc stop
irrecord --device=/dev/lirc0 urc-7960
```

After that you have a config file. Thats my (orginal by M. Hippert → used as template) :

urc-7960.conf

```
# Please make this file available to others
# by sending it to <lirc@bartelmus.de>
#
# this config file was automatically generated
# using lirc-0.8.6(default) on Sun Feb 13 11:48:28 2011
#
# contributed by AN orginal by M. Hippert

            KEY_BACK                    0x1222
            KEY_OK                      0x0217
            BTN_RIGHT                   0x0216
            KEY_UP                      0x0210
            KEY_DOWN                    0x0211
            BTN_LEFT                    0x0215
            KEY_YELLOW                  0x022D
            KEY_RED                     0x022B
            KEY_GREEN                   0x022C
            KEY_BLUE                    0x022E
            KEY_INFO                    0x020F
            KEY_MENU                    0x0212
            KEY_TV2                     0x122F
            BTN_1                       0x1201
            BTN_2                       0x1202
            BTN_3                       0x1203
            BTN_4                       0x1204
            BTN_5                       0x1205
            BTN_6                       0x1206
            BTN_7                       0x1207
            BTN_8                       0x1208
            BTN_9                       0x1209
            BTN_0                       0x1200
        end codes

end remote
```

After including this into the /etc/lirc/lircd.conf and starting lirc you sould see the translated commands with irw

/etc/lirc/lircd.conf

```
##urc-7960
include "/etc/lirc/urc-7960.conf"
```

```
/etc/init.d/lirc start
```

```
irw
```

Configuring XBMC

Create an “Lircmap.xml” in your xbmc-data home.

```
touch ~/.xbmc/userdata/Lircmap.xml
```

The Documentation can be found here. After reboot XBMC should use the new file.

Here is my:

Lircmap.xml

```
<lircmap>
    <remote device="urc-7960">
        <start>KEY_SCREEN</start>
        <skipminus>KEY_BACK</skipminus>
        <stop>KEY_STOP</stop>
        <skipplus>KEY_NEXT</skipplus>
        <reverse>KEY_REWIND</reverse>
        <play>KEY_PLAY</play>
        <forward>KEY_FASTFORWARD</forward>
        <start>KEY_LIST</start>
        <pause>KEY_PAUSE</pause>
        <record>KEY_RECORD</record>
        <volumeplus>KEY_VOLUMEUP</volumeplus>
        <mute>KEY_MUTE</mute>
        <volumeminus>KEY_VOLUMEDOWN</volumeminus>
        <left>BTN_LEFT</left>
        <right>BTN_RIGHT</right>
        <up>KEY_UP</up>
        <down>KEY_DOWN</down>
        <select>KEY_OK</select>
        <pageplus>KEY_CHANNELUP</pageplus>
        <back>BTN_BACK</back>
        <pageminus>KEY_CHANNELDOWN</pageminus>
        <red>KEY_RED</red> <!-- HOME -->
        <myvideo>KEY_GREEN</myvideo>
        <mymusic>KEY_YELLOW</mymusic>
        <mypictures>KEY_BLUE</mypictures>
        <info>KEY_INFO</info>
        <title>KEY_MENU</title> <!-- CONTEX MENU -->
        <display>KEY_TV2</display>  <!-- FULL SCREEN -->
        <mytv>KEY_MODE</mytv>
        <menu>KEY_ESC</menu>
        <back>BTN_BACK</back>
        <one>KEY_1</one>
        <two>KEY_2</two>
        <three>KEY3</three>
        <four>KEY_4</four>
        <five>KEY_5</five>
```

```
        <six>KEY_6</six>
        <seven>KEY_7</seven>
        <eight>KEY_8</eight>
        <nine>KEY_9</nine>
        <power>BTN_EXTRA</power>
        <zero>KEY_0</zero>
    </remote>
</lircmap>
```

Perhaps you have to adapt the keymap for remote so that it fit to you wishes. The orginal is located in "/usr/share/xbmc/system/keymaps/". You can copy it to ~/.xbmc/userdata/keymaps/ and edit it.

Have fun with the new remote-control.
